Data as of September 30, 2017

The MSCI ACWI ex-US Index is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed and emerging markets, excluding the US. The index is not available for direct investment. The index provides total returns in US dollars with net dividends reinvested.

The referenced Index is shown for general market comparisons. Comparisons to Indexes have limitations because indexes have volatility and other material characteristics that may differ from a particular mutual fund. Indexes do not represent actual trading or any material economic and market factors that might have had an impact on the advisor's decision-making.

Active Share is a measure of the percentage of stock holdings in a portfolio that differ from the benchmark index. Active share can range from 0% (index fund) to 100% (no commonality with the benchmark index).

Our value strategy may not meet its investment objective and you could lose money by investing in the Centerstone Funds. Value investing involves the risk that such securities may not reach their expected market value, causing the Funds to underperform other equity funds that use different investing styles.

Investments in foreign securities could subject the Fund to greater risks including, currency fluctuation, economic conditions, and different governmental and accounting standards. Foreign common stocks and currency strategies will subject the Fund to currency trading risks that include market risk, credit risk and country risk. There can be no assurance that the Fund's currency hedging strategy will reduce risk or that hedging transactions will be either available or cost effective. The Fund's use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Domestic economic growth and market conditions, interest rate levels, and political events are among the factors affecting the securities markets in which the Fund invests. Value investing involves buying stocks that are out of favor and/or undervalued in comparison to their peers or their prospects for growth. There is a risk that issuers and counterparties will not make payments on securities and other investments held by the Fund, resulting in losses to the Fund.

Large-Cap Company Risk is the risk that established companies may be unable to respond quickly to new competitive challenges such as changes in consumer tastes or innovative smaller competitors. Investments in lesser-known, small and medium capitalization companies may be more vulnerable than larger, more established organizations.

In general, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. The Fund may invest, directly or indirectly, in "junk bonds." Such securities are speculative investments that carry greater risks than higher quality debt securities.

Investors should carefully consider the investment objectives, risks, charges and expenses of the Centerstone Funds. This and other important information about the Funds are contained in the prospectus, which can be obtained by calling 877.314.9006. The prospectus should be read carefully before investing.
